1. Executive Summary

myWealthPilot is a comprehensive personal finance management platform built for Indian users. It provides 30+ financial tools spanning expense tracking, investment portfolio management, insurance analysis, tax planning, AI-powered suggestions, and gamification - all within a Progressive Web App (PWA) that works offline and supports 4 Indian languages.

The platform operates entirely on free-tier infrastructure (Rs.0/month excluding domain renewal), serving users through Render.com hosting with a Neon.tech PostgreSQL database. It features a unique WealthCard - Financial Trust Score system that no other Indian finance app offers.

Key Metrics

Total Routes	151+ API endpoints
Templates	67 HTML pages
Database Models	25 tables
Languages	4 (English, Tamil, Hindi, Telugu)
Translation Keys	850+
Expense Categories	16
Investment Types	20+
Calculators	15+
Python Dependencies	17 packages
Monthly Cost	Rs.0 (all free tiers)

2. Technology Stack

Backend

Language	Python 3.12
Framework	Flask 3.0
ORM	SQLAlchemy + Flask-SQLAlchemy 3.1.1
Migration	Flask-Migrate 4.0.5 (Alembic)
Auth	Flask-Login 0.6.3
Forms/CSRF	Flask-WTF 1.2.1 + WTForms 3.1.1
Rate Limiting	Flask-Limiter 3.5.0
Email	Flask-Mail 0.10.0
WSGI Server	Gunicorn 21.2.0
PDF Parsing	pdfplumber 0.11.9
Image Processing	Pillow 12.1.1
HTTP Client	requests 2.33.1
HTML Parsing	beautifulsoup4 4.14.3
Date Utils	python-dateutil 2.8.2
Numerics	numpy 1.26.2
Validation	email-validator 2.1.0
PostgreSQL Driver	psycopg[binary] >= 3.1.0

Frontend

CSS Framework	Bootstrap 5.3.2
Charts	Chart.js 4.4.1
Icons	Material Icons Outlined (Google)
Fonts	Google Fonts - Inter
Theme	#6C5CE7 purple, gradient #4A00E0 to #8E2DE2
Voice Input	Web Speech API (browser-native)
Offline Storage	IndexedDB (browser-native)
PWA	Service Worker + manifest.json
QR Codes	goqr.me API (for WealthCard)

Payment

Gateway	Razorpay (INR)
Methods	UPI, Cards, Wallets, Net Banking
Webhooks	Signature verification (HMAC-SHA256)

3. Infrastructure & Hosting

Web Server - Render.com

Plan	Free (\$0/month)
CPU	Shared CPU (0.1 vCPU)
RAM	512 MB (hard limit, SIGKILL on exceed)
Workers	2 Gunicorn sync workers, 120s timeout
Bandwidth	100 GB/month
Auto-deploy	Yes - on git push to main
Sleep	15 min idle -> sleep (cron-job.org keeps alive)
Cold Start	~30-50 seconds
SSL	Let's Encrypt (auto-managed)
Region	Oregon (US West)
Health Check	/health endpoint
Runtime	Python 3.12.0

Database - Neon.tech

Plan	Free (\$0/month, no expiry)
Engine	PostgreSQL 17
Storage	0.5 GB limit (~34 MB used)
Compute	Autoscaling up to 2 CU, scale-to-zero
Tables	25 (24 app + 1 Alembic)
Branches	10 per project
Region	US East 1 (N. Virginia, AWS)
Connection	SSL required (sslmode=require)

Domain & DNS

Domain	mywealthpilot.in
Render Subdomain	wealthpilot-wcm7.onrender.com
SSL	Auto Let's Encrypt
Cost	~Rs.500-800/year (renewal only)

CI/CD & Source Control

Repository	GitHub - vinothkumarmari/WealthPilot
Plan	GitHub Free
Build	pip install -r requirements.txt && flask db upgrade

Start	gunicorn run:application --bind 0.0.0.0:\$PORT --workers 2 --timeout 120
-------	--

Keep-Alive

Service	cron-job.org (Free)
Interval	Every 14 minutes -> /login
Purpose	Prevent Render free tier sleep

Monthly Cost Summary

Service	Plan	Cost
Render Web Service	Free	\$0
Neon PostgreSQL	Free	\$0
GitHub	Free	\$0
cron-job.org	Free	\$0
Domain (annual)	mywealthpilot.in	~Rs.700/yr
TOTAL		Rs.0/month

4. Security Architecture

Authentication & Authorization

Password Hashing	Werkzeug pbkdf2:sha256 (salted)
OTP	6-digit, HMAC-SHA256 hashed, 10-min expiry
Session	Flask-Login, server-side, 30-min idle timeout
Max Session	2 hours absolute
Lockout	5 failed login attempts
Admin Bypass	OTP skip for admin + trusted users
Per-User OTP	Toggleable from admin panel

Transport & Data Security

HTTPS	TLS 1.3 via Let's Encrypt
Database	SSL (sslmode=require)
CSRF	Flask-WTF token on all forms
Rate Limiting	Flask-Limiter on sensitive endpoints
IPv4 Forced	socket.getaddrinfo patched for AF_INET
Input Validation	WTForms + server-side checks
File Upload	Type validation, size limits
XSS Prevention	Jinja2 auto-escaping
SQL Injection	SQLAlchemy ORM (parameterized)

SMTP Status

Gmail SMTP (smtp.gmail.com:587) is configured but BLOCKED on Render Free tier (outbound ports 25/465/587 firewalled). Workaround: OTP bypass for admin and trusted users, with global and per-user OTP toggle from admin panel. All 12 OTP send calls use background threads (queue_otp_email) to prevent blocking.

5. Database Schema (25 Models)

Model	Key Fields & Purpose
User	40+ fields: credentials, profile, salary, risk appetite, budget ratios, language, photo
Income	source, type (Salary/Freelance/Business/Rental/Dividend), amount, frequency, date
Expense	category (16 types), amount, date, description, is_recurring, member
Investment	20+ types (FD/RD/MF/Stocks/Gold/PPF/NPS/etc), platform, current_value, returns
Asset	Car/Bike/House/Land/Farming/Jewelry/Electronics, purchase_price, current_value, EMI
InsurancePolicy	Life/Term/Health/ULIP, provider, premium, sum_assured, maturity_value
PremiumPayment	Tracks each insurance premium payment with date and amount
Scheme	Gold schemes, chit funds, bonds with installment tracking and maturity
SIP	Mutual fund SIPs with day-of-month, expected_return, total_invested
Loan	Home/Car/Personal/Education/Credit Card, EMI, interest_rate, outstanding
BankAccount	Savings/Current/FD/RD with balance and interest_rate
ProvidentFund	EPF/VPF/GPF/PPF with UAN, employee/employer contributions
FinancialGoal	goal_name, target_amount, current_saved, target_date, priority
Budget	Monthly budgets by category with limit amounts
FamilyMember	name, relationship, age, occupation, monthly_income
Notification	title, message, category, icon, link, is_read status
GoldPriceAlert	karat (24K/22K/18K/Silver), direction, target_price, triggered
TrackedProduct	E-commerce URL, platform, current_price, mrp, discount, target_price
PriceHistory	Price snapshots per tracked product over time
GlobalPriceSnapshot	Cross-user price cache by product_key & platform
UserStreak	expense_streak, login_streak, budget_streak + all-time bests
UserBadge	Achievement badges with key, name, icon, color, category
WealthCard	Trust score (0-1000), grade, personality, 6 dimension scores, public toggle
PaymentTransaction	Razorpay orders with plan_code, status, signature verification
Feedback	User ratings (1-5 stars), category, message

6. Core Features (Currently Live)

Financial Tracking

- Income tracking - Salary, Freelance, Business, Rental, Dividends, Interest
- Expense tracking - 16 categories with voice input in 4 languages
- Budget Planner - 50/30/20 rule with customizable ratios
- Loan management - Home/Car/Personal/Education/Credit Card EMI tracking
- Bank account management - Savings, Current, FD, RD with balances

Investment Portfolio

- 20+ investment types: FD, RD, MF, Stocks, Gold, Silver, PPF, NPS, REITs
- SIP Tracker - Monthly SIP with day-of-month reminders
- Provident Fund - EPF/VPF/GPF/PPF with contribution tracking
- Scheme & Bonds - Gold schemes, chit funds, government bonds
- Assets - Real estate, vehicles with appreciation/depreciation tracking

Gold & Silver

- Live IBJA gold/silver prices (24K, 22K, 18K)
- Global gold prices in multiple currencies
- ML-based gold price prediction
- Price alerts (above/below target)
- Portfolio management for physical & digital gold

Insurance Management

- Policy tracking - Life, Term, Health, ULIP, Endowment
- 19 insurance provider integrations
- Premium payment tracking with due date reminders
- OCR scanning of policy documents
- Insurance gap analysis for individuals and families
- Coverage adequacy recommendations

Tax & Government

- ITR Guide with income tax calculator
- Tax planning with Section 80C/80D/80CCD deduction optimization
- Indian Union Budget tracker
- Government schemes directory (14+ schemes)
- Scheme eligibility calculator

Planning & Goals

- Financial goal setting with auto-calculation
- Future Planner (wealth projection to 2040+)
- What-If Simulator for financial scenarios
- Retirement corpus calculator
- Joint goals for couples/families

AI-Powered Tools

- Financial Health Score (0-100 with A+ to D grades)
- Budget analysis with actionable tips
- Investment suggestions based on age & risk
- Asset buying plans (car, house, land, farm)
- Expense trend prediction (ML)
- 50+ business ideas (profession & state-specific)
- AI Playbooks for financial strategies
- Credit card recommendations by salary tier

Family Features

- Family member management
- Combined family dashboard
- Shared expense tracking
- Family retirement planner
- Collective insurance analyzer

Engagement & Gamification

- Daily streaks (expense, login, budget)
- Achievement badges for milestones
- WealthCard - Financial Trust Score (0-1000)
- Shareable verification link with QR code
- 7 Money Personalities

Reporting & Analytics

- Custom date-range financial reports
- Portfolio performance analysis
- Expense trend analysis
- CSV/PDF/JSON export
- Download all data feature

Calculators (15+)

- EMI, SIP, Compound Interest, Retirement Corpus
- Home Loan, Personal Loan, RD, PPF, NPS
- Inflation Adjustment, Goal Planning
- Mutual Fund Returns, Savings Goal, Budget Planner, Income Tax

Other Features

- Price Tracker - E-commerce product monitoring
- Rate Monitor - FD/RD/PPF/EPF/NPS rates across banks
- Voice expense entry in 4 languages
- Document OCR scanning
- Notifications - Premium/EMI/SIP/Goal/Budget alerts

7. AI & ML Engine

myWealthPilot includes 17 AI/ML-powered functions in `app/ml_engine.py`. These are rule-based and statistical models that run server-side with zero API cost.

Function	Description
Financial Health Score	Scoring (0-100) based on savings, investments, debt, expense ratios
Budget Analysis	50/30/20 rule checking with category-wise breakdown and tips
Investment Suggestions	Age + risk-based allocation across 20+ instrument types
Asset Buying Plans	EMI capacity, budget limits (car=0.5x, house=5x annual salary)
Expense Prediction	Linear regression on historical expense data for next-month forecast
Retirement Corpus	Inflation-adjusted corpus + monthly SIP needed
Investment Returns	Lumpsum + SIP calculator with yearly breakdown
Tax Saving	Section 80C/80CCD/80D optimization with estimated tax saved
Loan Analysis	Interest rate vs benchmark, EMI-to-income ratio, good/bad verdict
Credit Card Offers	Salary-tier recommendations (SimplyCLICK to Infinia)
Gold/Silver Analysis	30-day/365-day/5-year trends with bullish/bearish classification
Buy Timing Advisor	Best months for car/bike/electronics with expected savings %
Grocery Offers	Platform-specific offers (BigBasket, Blinkit, Zepto, etc.)
AI Playbooks	Marketing, pricing, cash flow strategies by profession
Future Readiness	Asset allocation by risk level, projected corpus, 4 milestones
Business Ideas	50+ ideas by profession/state with govt scheme eligibility
Commodity Suggestions	SGB, Gold ETF, Silver ETF with allocation recommendations

8. WealthCard - Financial Trust Score

WealthCard is myWealthPilot's signature feature - a comprehensive Financial Trust Score (0-1000) that measures overall financial health across 6 dimensions. Unlike CIBIL which only covers credit, WealthCard scores savings, investments, insurance, emergency preparedness, and financial discipline.

Score Dimensions (Total: 1000 points)

Savings Discipline	0-200 pts: Savings rate + month-over-month consistency
Debt Health	0-200 pts: Debt-to-income ratio, zero debt = full score
Investment Maturity	0-200 pts: Investment amount vs income + type diversity
Insurance Coverage	0-150 pts: Cover vs 10x income + health/term bonus
Emergency Fund	0-100 pts: Bank balance covering 1-12 months of expenses
Discipline	0-150 pts: Tracking tenure + modules used + streaks

Grade System

AAA (850-1000)	Exceptional financial health
AA (750-849)	Excellent financial management
A (650-749)	Very good financial standing
BBB (550-649)	Good, room for improvement
BB (450-549)	Fair financial position
B (350-449)	Below average, needs attention
C (200-349)	Poor financial health
D (0-199)	Very poor, start tracking today

Money Personalities (7 Types)

The Saver	Prioritizes building reserves, strong savings habit
The Investor	Grows wealth actively through diversified investments
The Guardian	Protects family with insurance & emergency funds
The Strategist	Balanced across all dimensions, data-driven
The Builder	Steady, goal-oriented, building wealth brick by brick
The Spender	Enjoys the present, needs savings focus
The Explorer	Getting started, great potential ahead

Sharing & Verification

Users can make their WealthCard public, generating a unique verification link with QR code. Anyone can scan the QR or visit the link to see the card - no login required. The verification page shows trust score, grade, personality, and dimension bars but NEVER reveals exact financial amounts. Uses HMAC-SHA256 verification tokens.

9. Subscription Plans & Pricing

Plan Tiers

Plan	Price	Key Features
Starter (Free)	Rs.0/month	Dashboard, Income, Expenses, Budget, Loans
		Investments, Goals, Calculators, Achievements
		WealthCard, Gold/Silver, What-If Simulator
Pro Monthly	Rs.99/month	Everything in Starter +
		Insurance, Schemes, SIPs, Assets, Tax Planning
		ITR Guide, AI Suggestions, AI Playbooks
		Reports, Rate Monitor, Business Ideas
Family Monthly	Rs.199/month	Everything in Pro +
		Future Planner 2040+, Govt Schemes
		Family Members, Family Dashboard
		Joint Goals, Shared Expenses

Payment Integration

Razorpay payment gateway handles INR transactions via UPI, credit/debit cards, wallets, and net banking. Server-side webhook verification ensures tamper-proof payment confirmation. Billing history available in user profile.

10. PWA & Offline Capabilities

Service Worker	Caches static assets for offline access
Web Manifest	Installable as native app (Add to Home Screen)
Offline Dashboard	Cached dashboard viewable without internet
IndexedDB	Local data storage for offline sync
Background Sync	Pending transactions synced on reconnect
Theme	Customizable light/dark mode
Responsive	Full mobile/tablet/desktop support

11. Internationalization (i18n)

myWealthPilot supports 4 Indian languages with 850+ translation keys. Users can switch language from profile settings. Voice input also supports all 4 languages.

English (en)	Default language
Tamil (ta)	Full translation + voice commands
Hindi (hi)	Full translation + voice commands

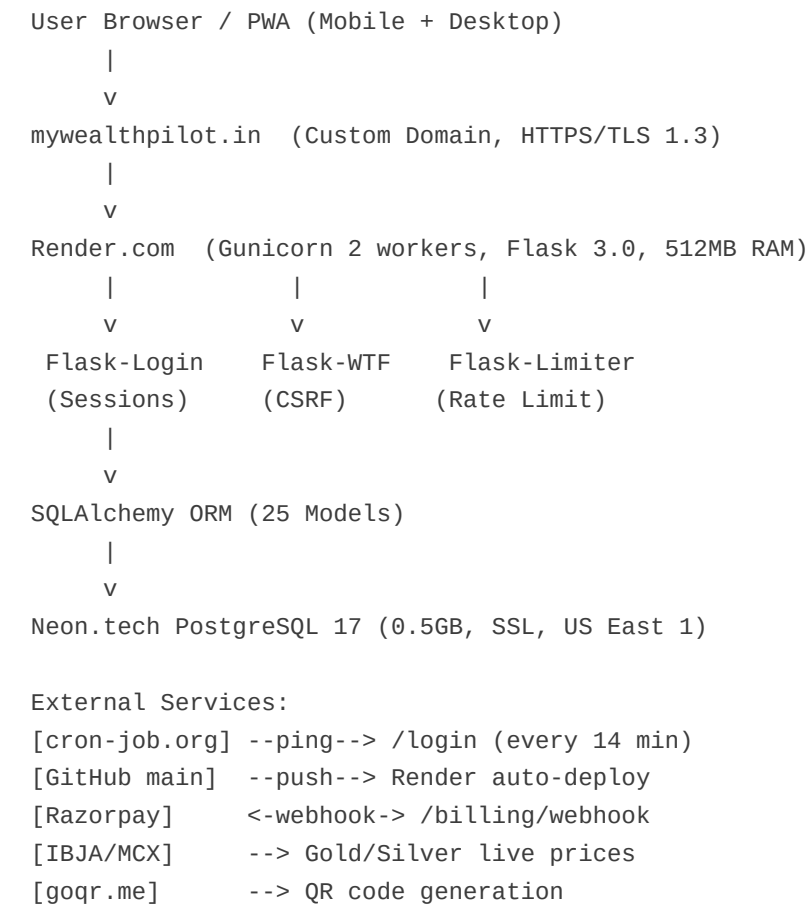

Telugu (te)	Full translation + voice commands
Voice Speech API	en-IN, ta-IN, hi-IN, te-IN locales
Category Keywords	Multi-language voice recognition per category

12. Admin Panel

Accessible at /admin (admin users only). Provides full user and system management.

User Management	View all users, toggle active/verified status, delete users
Password Reset	Reset any user's password via modal (no OTP needed)
OTP Toggle (Global)	Enable/disable email OTP verification for all users
OTP Toggle (Per-User)	Skip OTP for specific trusted users
DB Info Display	Shows current DB host, name, provider (Neon/Render badge)
Email Test	Test SMTP configuration
DB Migration	One-click migration tool (Render -> Neon)
Server Info	App port, mail server, environment details

13. Architecture Flow

14. Current Limitations

RAM	512 MB hard limit (OOM = SIGKILL)
Workers	2 sync workers = 2 concurrent requests max
SMTP	Blocked on Render Free (ports 25/465/587)
Cold Start	30-50 sec after idle sleep
DB Storage	0.5 GB Neon free tier
No Load Balancer	Single instance, no horizontal scaling
No CDN	Static assets served directly from app
No Real-time	No WebSocket support, polling only
No UPI Sync	No API available from GPay/PhonePe/Paytm
No SMS Reading	Web app cannot read device SMS

15. FUTURE: Smart Statement Import

Auto-import expenses and income from bank/UPI statement files. Since no UPI app provides a public API, the solution is user-uploaded statement parsing.

Problem Statement

Users currently add expenses manually. No Indian UPI app (GPay, PhonePe, Paytm) offers a public API for third-party transaction access. SMS parsing requires a native mobile app. Account Aggregator (RBI-licensed) costs lakhs and requires NBFC registration.

Solution: Statement File Upload + AI Categorization

User uploads bank statement or UPI export -> auto-parse -> auto-categorize -> review -> import.

End-to-End Flow

- Step 1: User clicks 'Import Statement' on Expenses page
- Step 2: Uploads PDF/CSV from bank app or UPI app
 - - GPay: Settings > Download statement (PDF)
 - - PhonePe: Transaction History > Download (PDF)
 - - Bank apps: Download statement (PDF/CSV/XLS)
 - - Net banking: Download account statement
- Step 3: Backend parses the file using pdfplumber (PDF) or csv module (CSV)
 - - Extracts: date, description, debit/credit, amount, balance
 - - Handles 10+ Indian bank formats (SBI, HDFC, ICICI, Axis, Kotak, etc.)
- Step 4: AI auto-categorizes each transaction
 - - Keyword matching: 'Swiggy' -> Food, 'Uber' -> Transport, 'Amazon' -> Shopping
 - - UPI ID parsing: 'paytm' -> identify merchant
 - - Amount-based: Large debits -> check if matches known EMI/premium
 - - Unknown -> 'Miscellaneous' (user can recategorize)
- Step 5: Preview page shows parsed transactions in a table
 - - User can edit category, description, toggle include/exclude
 - - Duplicate detection: skip if same date+amount already exists
 - - Credit entries -> auto-tag as Income
 - - Debit entries -> auto-tag as Expense
- Step 6: User clicks 'Import Selected' -> bulk insert into Expense/Income tables
- Step 7: Flash success message with count of imported transactions

Supported Bank Formats

SBI	PDF with table layout, date/narration/debit/credit/balance
HDFC	PDF/CSV, date/narration/chq/value/debit/credit/balance
ICICI	PDF/CSV, S.No/date/mode/particulars/deposits/withdrawals
Axis	PDF, date/description/debit/credit/balance
Kotak	PDF/CSV, date/description/debit/credit/balance
GPay Export	PDF, date/to-from/amount/status/UPI ref
PhonePe Export	PDF, date/description/amount/status
Generic CSV	Auto-detect columns: date, amount, description

Technical Implementation

File Parsing	pdfplumber (PDF), csv module (CSV) - already in requirements
Category Engine	Keyword dict with 200+ merchant-to-category mappings
Duplicate Check	Hash of date+amount+description against existing entries
Bulk Insert	SQLAlchemy bulk_save_objects for performance
File Size Limit	Max 5 MB per upload
Privacy	File processed in memory, never stored on server
Security	CSRF token, login required, user_id scoping

UX Flow

1. Expenses page -> 'Import Statement' button (next to 'Add Expense')
2. Modal: drag-and-drop or file picker (PDF/CSV)
3. Preview table with auto-categorized transactions
4. Edit categories inline, toggle rows, select date range
5. 'Import Selected' -> bulk save -> redirect to expenses with success flash

16. FUTURE: Passkey Authentication (WebAuthn)

Replace email OTP with biometric authentication (fingerprint/face unlock). Solves the SMTP blocked problem permanently. Works on all modern browsers.

Problem

Render Free blocks SMTP ports -> OTP emails cannot be sent -> current workaround is OTP bypass for trusted users. Passkeys eliminate the need for OTP entirely.

Solution: WebAuthn / FIDO2 Passkeys

- User registers a passkey (fingerprint/face/PIN) from Profile page
- Next login: 'Sign in with Passkey' button triggers biometric prompt
- Browser handles authentication locally (no network call needed)
- Server verifies the cryptographic signature
- No password, no OTP, no email required
- Works offline (biometric is local)
- Supported: Chrome, Safari, Firefox, Edge (all platforms)

Technical Implementation

Library	py_webauthn (Python WebAuthn server)
Registration	POST /auth/passkey/register -> challenge + credential
Authentication	POST /auth/passkey/login -> verify signature
Storage	New model: UserPasskey (credential_id, public_key, counter)
Fallback	Password login still available
Cost	\$0 (no API keys, no SMTP needed)

17. FUTURE: Advanced Roadmap

Feature	Description	Priority	Status
Smart Statement Import	Auto-parse bank/UPI PDFs into expenses/income	High	Ready to build
Passkey Authentication	WebAuthn biometric login (replaces OTP)	High	Ready to build
End-to-End Encryption	Encrypt financial data with user's key	Medium	Research phase
Zero-Knowledge Proofs	Prove 'score > 700' without revealing score	Low	Future concept
Native Mobile App	React Native or Flutter wrapper for PWA	Medium	Post-scale
SMS Parsing (Mobile)	Read bank SMS for auto-expense (native only)	Medium	Needs mobile app
Account Aggregator	RBI-licensed direct bank data access	Low	Requires NBFC license
Multi-Currency	Support USD, GBP, EUR for NRI users	Medium	Schema change needed
AI Chatbot	Natural language financial queries	Medium	Needs AI API
Social Features	Compare anonymized scores with friends	Low	Privacy concerns
WhatsApp Bot	Expense entry via WhatsApp messages	Medium	Needs Meta API
Scheduled Reports	Weekly/monthly email summaries	Low	Needs working SMTP
CDN Integration	Cloudflare for static assets	Low	Performance boost
Redis Cache	Session + query caching	Medium	Needs paid tier
WebSocket	Real-time notifications	Low	Needs paid tier

18. Appendix: Key API Routes

Selected important routes from 151+ total endpoints:

Route	Method	Purpose
/	GET	Landing / login page
/login	GET/POST	User login with OTP
/register	GET/POST	User registration
/dashboard	GET	Main financial dashboard
/income	GET	Income tracking page
/income/add	POST	Add income entry
/expenses	GET	Expense tracking page
/expenses/add	POST	Add expense
/expenses/edit/<id>	POST	Edit expense
/expenses/delete/<id>	POST	Delete expense
/budget	GET	Budget planner
/loans	GET	Loan management
/investments	GET	Investment portfolio
/policies	GET	Insurance policies
/schemes	GET	Schemes & bonds
/sips	GET	SIP tracker
/gold-silver	GET	Gold & silver portfolio
/global-gold	GET	Global gold prices
/gold-prediction	GET	ML gold prediction
/assets	GET	Asset management
/goals	GET	Financial goals
/bank-accounts	GET	Bank accounts
/provident-fund	GET	PF tracking
/tax-planning	GET	Tax planning tools
/itr-guide	GET	ITR filing guide
/calculators	GET	15+ calculators
/suggestions	GET	AI suggestions
/ai-playbooks	GET	AI business playbooks
/future-planner	GET	Future wealth planner
/business-ideas	GET	50+ business ideas
/reports	GET	Financial reports
/rate-monitor	GET	Rate monitor
/govt-schemes	GET	Government schemes
/indian-budget	GET	Indian budget tracker
/achievements	GET	Badges & streaks
/wealthcard	GET	Financial trust score card
/wealthcard/calculate	POST	Calculate trust score
/wealthcard/verify/<t>	GET	Public verification (no login)

/what-if-simulator	GET	What-if scenarios
/price-tracker	GET	Product price tracker
/notifications	GET	Notification center
/notifications/count	GET	Unread count (JSON)
/profile	GET/POST	User profile
/admin	GET	Admin panel
/admin/reset-password/<id>	POST	Admin password reset
/admin/toggle-otp	POST	Toggle global OTP
/billing/create-order	POST	Razorpay order
/billing/webhook	POST	Razorpay webhook
/health	GET	Health check endpoint
